GLOBAL Bake

Jade Report Writer

This is an optional Jade development that allows the user to create a report to their own specifications and design layout while enabling the user to select specific data that the report is to based upon.

Features

- ?? Allows the user to create the layout and collection of data for reports.
- ?? Reports are created by creating a layout (with the option to use custom created templates for report continuity) and a query (to select and arrange data). The user can then run the report from a list accessable in Globalbake.
- ?? The Report Generator
    - ?? This allows full graphical interface control of design and layout of the report and can be saved and edited as desired.
    - ?? Can print and preview the report. The user also has the ability to export the file as an *.txt, *.csv, *.rtf, *.htm, *.xml.
    - ?? Can have user preferences for toolbars, layout and appearance options.
- ?? Templates
    - ?? Templates allow the user to setup and re-use standard layouts. These can include headers, footers, logos etc.
    - ?? The user can create and edit templates for consistent report layouts.
    - ?? The ability to add one or more templates to a report as desired.
- ?? Query Engine
    - ?? This specifies which data will be used in the current report. E.g. Report on All products beginning with the letter 'A'.
    - ?? Query profiles provide different ways to view data on the same report.

Benefits

- ?? Ability to customise report layouts.
- ?? Greater ability to sort, summarise and filter data. Can have mathematical functions such as averages, maximums, minimums and ranges.

Requirements

- ?? Jade 5.2
- ?? A familiarity with designing and building database reports will help.
