Bake

Mass Communications

Server managed faxing module for easy faxing of purchase orders, statements and remittance advices.

Features

- Single modem/fax installation.

- Handles bulk faxing easily and efficiently.

- Transparent functionality unlike printing to a fax printer.

- Minimises paperwork.

- Combining the Adobe Interface module and Mass Communications modules you get the ability to email as well as fax. The email functionality is extended to most reports that can currently be exported.

Benefits

- Saves postage, handling and time.

- Single user fax for Multi-User GlobalBake.

Requirements

- Only available for Windows 2000 and Windows NT servers
    Modem installed in server.
    GlobalBake must be running the Jadrap service.

- NT servers
    As NT fax services are limited in the interim it is necessary to use a single user copy of WinFaxPro installed on the server. (It is hoped that this requirement will be overcome in the next release).

- Windows 2000 Servers
    The windows fax services must be installed and running.

- Requires installing a fax module and registration number change.
